

Oil-flooded Screw Compressed Air System

185-315 kW

Reliability·Efficiency·Energy-saving

9M: Compliant to 2012-2016 EN 2

Ingersoll Rand offers the intelligence you need to win

Ingersoll Rand works to keep you ahead of your competition with advanced compressed air systems that boost productivity, lower operating expenses and extend equipment life. Each compressor is designed for reliability and efficiency, with industry-renowned mainframe performance for superior energy efficiency, outstanding reliability and world-class delivered capacity. All supported by unique advantages, including professional design and engineering, a comprehensive suite of support programs and long-life Ingersoll Rand-branded consumables.

New RM series oil-flooded screw air compressors. The intelligence you need to win.

Global Presence, Local Service

Manufacturing Sites

- Buffalo, NY, US
- Campbellsville, KY, US
- Mocksville, NC, US
- West Chester, PA, US
- Curitiba, Brazil
- Wasquehal, France
- Oberhausen, Germany
- Simmern, Germany

Global Distribution Centers

- Charlotte, NC, US
- Genk, Belgium
- Singapore
- Shanghai, China

Efficient Operation & Strong Information

The packaged oil-flooded screw air compressors are designed for overall ease of installation and operation to efficiently and reliably deliver rated airflow. The enclosure helps to manage the ambient and cooling air ventilation system for internal components, and also significantly reduce the noise emitted to the surroundings. The whole unit is designed for installation in a flat and ample space with no any special base and makes no intense vibration during operation.

High Performance

Maximized efficiency with advanced airend

In the development of the new RM series, we have used a very advanced new airend to deliver better performance. Enhancements have been made to the new airend for 16% higher efficiency and a further decrease in operating cost, including optimized rotor profile which increases the air volume by 14% from the previous models. The lower specific power means reduced equipment investment cost and energy consumption, and a lower total cost.

- **Innovative airend design** provides higher efficiency and ideal air volume
- **Reliable O ring accessories** are designed for high temperature up to 46°C, and with a rugged structure and lower failure risk

Ingersoll Rand Master Motor Advantages Underpinned by Integrated Drive

Ingersoll Rand integral gear drive system is specially designed to operate with no loss or no slip difference. The conservatively selected gears are mounted on the airend and motor shaft for speed optimization, and these helical gears are smooth running to make the airend rotate at a selected speed all the time for consistent performance and efficiency. The design has been improved in terms of reliability and robustness and fully validated in the 25-year-long use.

Airend – Heart of Every Air Compressor

Air compressor use accounts for a significant part of your energy costs. Our design team of skilled engineers and experts used advanced computer modeling techniques to optimize the airend to be with 15% higher efficiency, excellent airflow, lower operating noise, longer service life and higher reliability well known in the industry to improve your company's bottom line.

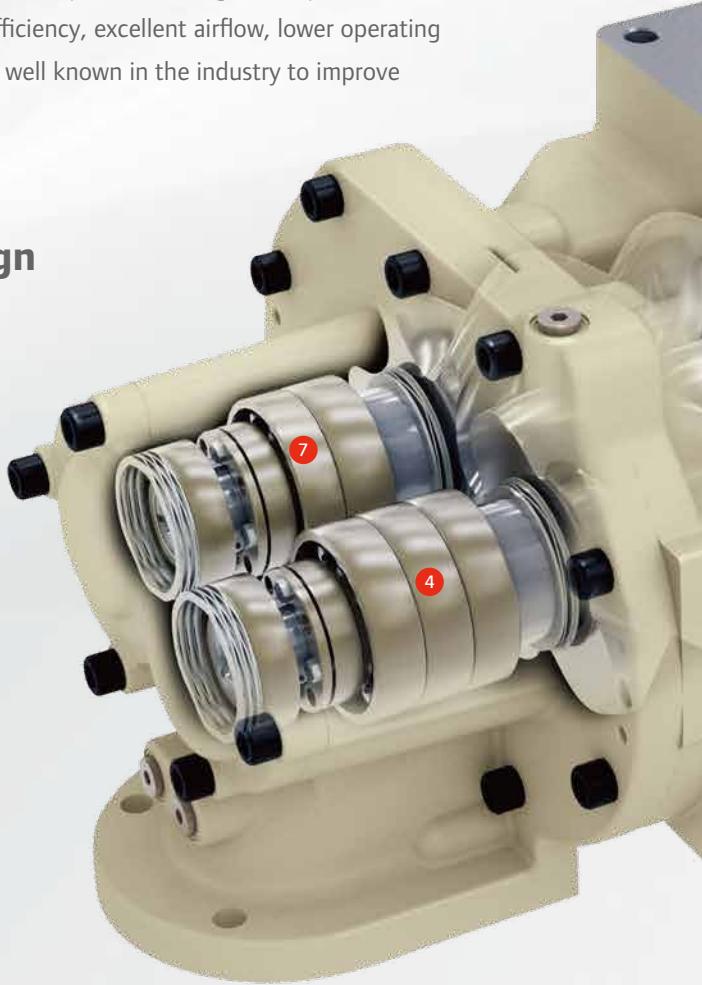

Long-lasting Reliable Operation Design

- ① Deliberate arrangement of lubrication points effectively and exactly conveys the lubricant to the required position, thus increasing reliability and reducing energy consumption.
- ② Advanced gear design enables more efficient and reliable transfer of drive energy.

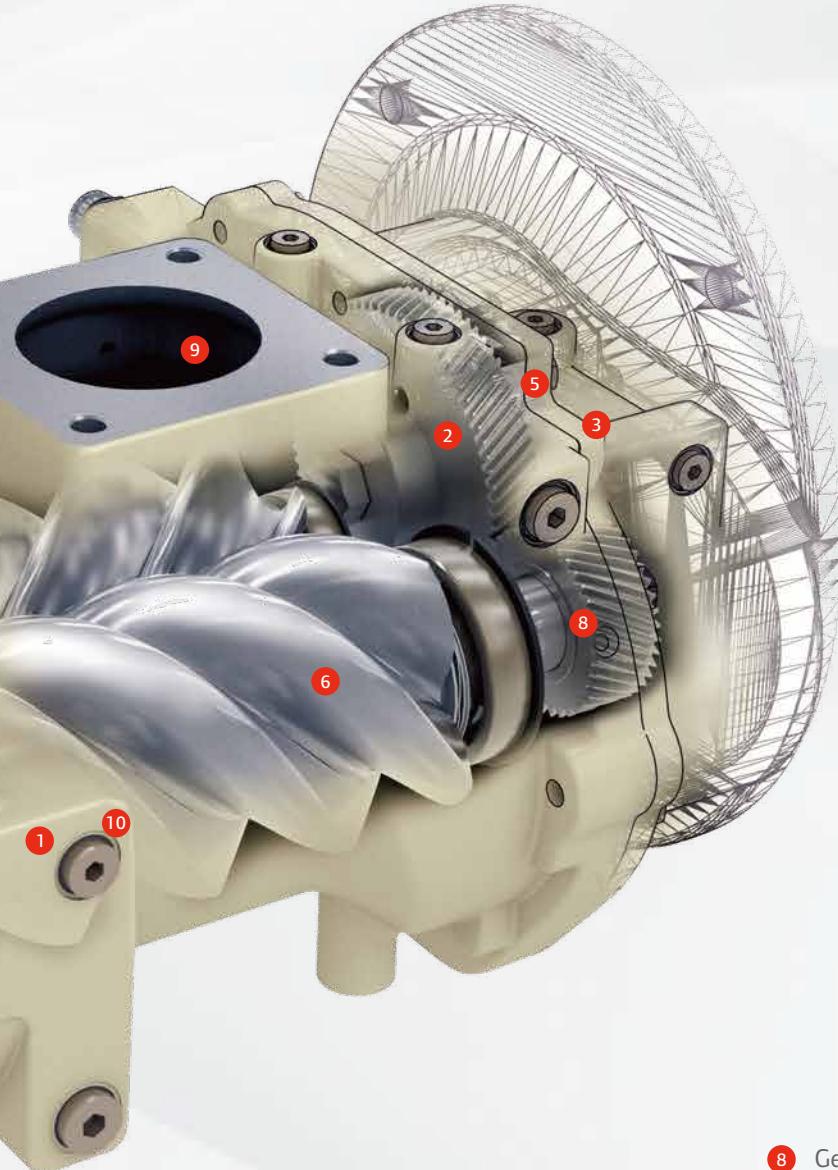

Integrated Gearbox

- ③ Integrated gearbox reduces windage loss and drive system length for better performance, higher efficiency and easier maintenance.

- ④ Enhanced bearing helps to reduce resistance, and improve energy management for higher reliability and better performance.

- ⑤ Maintenance-free sealed drive system requires no routine maintenance, and is protected against dust and moisture.

Excellent Energy Efficiency

Advanced Rotor Profile

⑥ Optimized screw rotor profile increases energy efficiency by 15% and air capacity by 19%, and also reduces energy cost.

⑦ Low-friction bearing helps to increase energy efficiency.

⑧ Gear lubrication is optimized to subtly inject lubricant to engaging position of the gear, which increases operating reliability and reduces energy consumption.

⑨ Streamlined inlet and outlet flow passage reduces pressure drop.

⑩ Optimized oil injection process lowers the temperature and increases efficiency during the compression process.

Saving More Energy

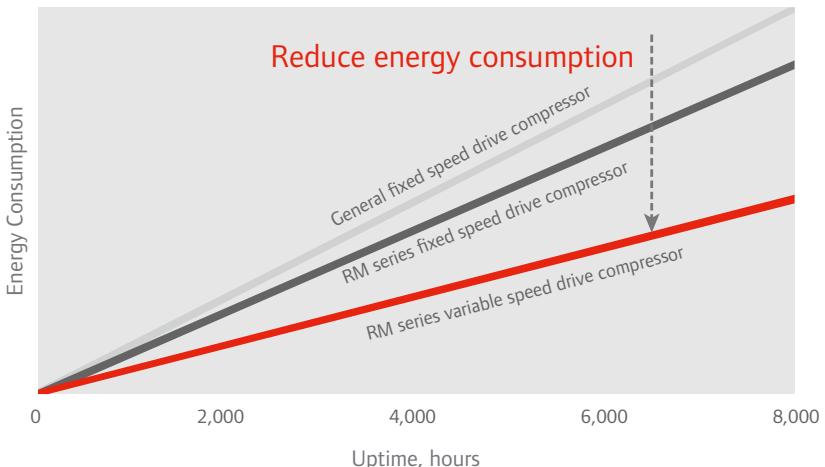

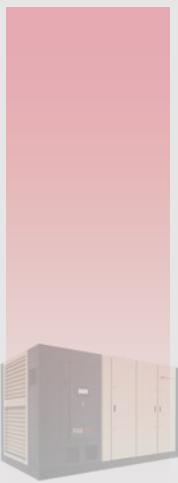

VSD Technology

More energy is saved by using Ingersoll Rand's advanced VSD technology and intelligent tuning method of air fluctuation at user's end. It has been proved to be up to **15%-20%** electricity cost saving for you.*

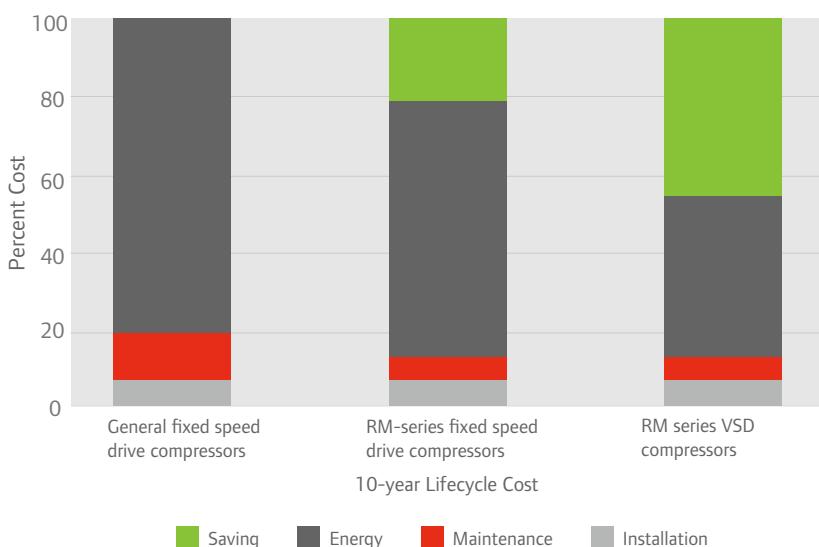

* Please dial Ingersoll Rand service hotline 4008202128 for electricity cost saving of different models.

Before leaving the factory, all Ingersoll Rand compressors have been filled with Ultra G coolant, a long-lasting premium synthetic lubricant with its effective cooling time being twice of other rotor lubricants, which reduces maintenance and lifecycle cost. The coolant can be effective for 8,000 hours in typical applications, and provides excellent wear & corrosion protection for better performance in presence of air and moisture.

Ingersoll Rand coolant has an extremely long service life and can significantly increase uptime

Greatly reduce total cost

Operate at 79% load for 4,000 hours per year; 0.05\$/kWh

Ease of Maintenance

- **Convenient top exhaust device** makes ventilation easier, and eliminates or recovers waste heat
- **Air-cooled and water-cooled units** meet your specific requirements for compressed air system
- **Easily accessible components** are located behind removable panels for easy maintenance.

State of the Art

Intelligent Control

RM185-220i: the intuitive KT controller keeps you informed of the operating status of the compressed air system, on site or remotely

RM275-315i/n, RM185-220n: the next generation Luminance series controllers with powerful control and remote management function are used to ensure smooth operation and greatly improve operation & management efficiency of your compressors.

A high-quality compressor may provide necessary operating parameters while supplying air. Thus, every RM series compressor is equipped with an intelligent controller, which can monitor key operation points and adjust system parameters, thus increasing uptime and reducing energy consumption. Wherever you are, you can learn the operating status of the air compressor in a real-time manner, and promptly take required actions.

Luminance Controller Features

More User-friendly Interface

- High-resolution touch screen
- More intuitive key parameter information display

Easier Upgrade

- Modular design for easier iterative upgrade of software functions and continuous improvement of user experience

More Advanced Algorithm

- Advanced controller algorithm for smaller pressure fluctuation and lower energy consumption

Steadier Performance

- Fully isolated design with stronger anti-interference capability and used in a variety of operating ambient conditions

More Efficient Management

- Built-in Internet connection for efficient remote management of operating status and maintenance schedule of the unit

Stronger core

- Multi-core processor for significant improvement of computing speed and communication capability, and significantly reduction in data collection and operation interface delay

What is Helix™?

Ingersoll Rand Helix™ aims to maximize the uptime and easily enable the owner's real-time compressed air system data management. The advanced sensor technology integrated in the compressor regularly sends data to our cloud platform, which can be accessed by you from PC, tablet PC or smartphone to learn machine operating condition at any time. We provide layered services for you to choose the required data monitoring and analysis level based on your specific operation demand.

Shorter scheduled downtime

Better performance of the unit

Visual maintenance plan

A panoramic view of maintenance plans under control

Timely maintenance

Longer service life of the unit

Online status monitoring

Higher productivity & mechanical efficiency

Lower malfunction risk

Minimized unscheduled downtime

● Standard ○ Optional \ Not applicable

*Standard PORO software, non-standard buzzer.

** Joint control of a series of 4 compressors of the same model, as standard after software upgrade.

***Heater is standard for high-voltage motor; contact Ingersoll Rand Sales for installation of a control system for the unit.

▲Please consult Ingersoll Rand Sales for special configuration.

Air Treatment

Moisture and contamination in compressed air cause significant problems in equipment operation, like rust, scale and clogged orifices resulting in product damage or costly shutdowns. Making our air treatment equipment an integral component of your compressed air system will improve productivity, system efficiency and product or process quality.

Refrigerated Dryers

Our cost-effective refrigerated dryers provide clean, dry air for most industrial applications. Choose efficient cycling dryers to maximize energy savings or non-cycling dryers for a lower initial cost

Refrigerated Dryer Features

- Dew points as low as 3°C (38°F), meeting Class 4 requirements
- Corrosion-free heat exchanger design for reliable operation
- Intuitive microprocessor control for easy operation
- Compact design for easy serviceability

Cost-Effective Operation

Maximum Performance

Use desiccant dryers when your application demands low dew points and the highest air quality.

Esiccant Dryers

At very low dew points, to obtain high quality air and to prevent possible freezing, esiccant dryers must be selected. Depending on whether you require lower initial capital costs, or lower energy use, choose from heatless, externally heated or heat blower desiccant models.

Desiccant Dryer Features

- Delivers reliable -40°C pressure dew point in most operating conditions
- High-strength desiccant and durable valves
- Low pressure drop design saves energy
- Advanced microprocessor control is easy to use and maximises uptime

Service Contract

PackageCARE™

PackageCARE: from 1st day when the agreement becomes effective, all operating risks transfer from you to us to free you from any concerns. You will enjoy 100% operating risk transfer for any machine model and life.

PlannedCARE™

PlannedCARE: all-round genuine spare parts and maintenance services. You will enjoy preventative diagnosis, current state analysis & trend judgment; 10 years' airen'd warranty (for new oil-flooded screw air compressor)

PartsCARE™

PartsCARE: genuine spare parts for daily maintenance. You will enjoy regular shipment of spare parts and daily maintenance reminder, 5 years' airen'd warranty (for new oil-flooded screw air compressor)

IT ALL ADDS UP TO PEACE OF MIND

Lower Cost of Ownership

CARE service programs provide the most cost-effective solutions based on your customised maintenance strategy.

Quality Results

Ingersoll Rand factory-trained service technicians are backed by more than 160 years of industry experience.

Increased Uptime

Our CARE programs help decrease unplanned downtime and costly production interruptions.

Efficient Energy Use

Peak system efficiency is achieved through properly performed maintenance and inspection.

Peace of Mind

Our world-class services will help you achieve the results you need, while you focus on what's important to your business.

Maintenance & Service Kit

Replacement / maintenance period: 2,000/4,000/8,000 hours

The kit includes all parts & components required for maintenance or service at a time

Reliability: constant air quality guarantee with genuine spare parts

Scheduling: regular maintenance & care as planned to decrease failure probability and increase operating stability

Efficiency: one chart No. replacing a number of spare parts lists to increase procurement & management efficiency

Comprehensiveness: all parts and components required for maintenance or service at a time are included for shorter lead time than individual parts

Economy: visual service cost budget and superiority in price to purchase of individual parts

One-stop service with genuine quality guarantee

Ingersoll Rand Inc. (NYSE:IR), driven by an entrepreneurial spirit and ownership mindset, is dedicated to Making Life Better for our employees, customers, shareholders, and planet. Customers lean on us for exceptional performance and durability in mission-critical flow creation and industrial solutions. Supported by over 80+ respected brands, our products and services excel in very complex and harsh conditions. Our employees develop customers for life through their daily commitment to expertise, productivity, and efficiency. For more information, visit www.IRCO.com.
