

# UPDATE 72

## NEW FEATURES

### For All Production Types

#### Modbus Equipment

New **Modbus** equipment can now be connected to the controller:

- **Gas meter (YYLC15-G6):** Measurement of temperature, pressure, and gas flow, with compensation and compressibility factor correction.
- **Residual chlorine probe (RK500-29):** Continuous measurement of residual chlorine levels in water using the constant pressure method principle.
- **Generator (Kohler):** Continuous monitoring of current, oil pressure, battery voltage, engine temperature, fuel level, etc.
- **And many more.**

#### Offline Alarms

Users can now receive an alert when the MAXIMUS controller loses internet connection longer than the selected delay (default value: 1 hour).

### Poultry

#### Bird Scale

Weighing logic simplified and more accurate, with tolerance-focused parameters, detailed curve display, access to the last 100 weights, and configurable delay between weighings.

#### Egg Flow 2.0

New version, more accurate and easier to configure, speed control, quick return to normal operation after conveyor is paused, and safety features for optimized operation.

**And much more!**  
**Install update 72 now!**
